

The gold standard for
track and trace integration

Thermal Inkjet

Wolke m610[®] oem

Wolke engineering — built to fit, designed to perform

The gold standard for global track and trace applications

Wolke — the trusted leader in thermal inkjet innovation

Since Wolke launched the first high resolution, low maintenance printing system in 2000, the brand has become the trusted leader in Thermal Inkjet (TIJ) coding technology for high value applications. Now with over 10,000 successful installs worldwide, the Wolke engineers have created a new state of the art – the m610 oem. Intelligent in design and practical in build, the m610 oem delivers breakthrough integration versatility combined with the industry's most powerful data handling and global track and trace capabilities.

The m610 oem offers complete backwards compatibility with the known and trusted m600 advanced, allowing use of the same remote communication protocols, printheads, layout files, and accessories. And yet, the m610 oem represents an entirely new class of track and trace coding system.

Ultimate flexibility when integration matters

The m610 oem controller is up to 60% smaller than comparable TIJ printers, offering system integrators and serialization OEMs a uniquely small and lightweight solution. The possibility of 18 different mounting orientations and four unique printhead designs helps address the common challenges of integrating into sophisticated packaging and serialization machinery. The option of connecting up to six printheads makes the system versatile. With a single controller, you can print up to six unique codes at once, or you can print with up to three printhead groups. This gives the user the choice of either double production run times between cartridge changes, or replacing ink cartridges without having to stop the line.

A 3.5" one-way controller display allows simple scroll to diagnostic information with no possibility of data entry or configuration. All printer operation and settings are managed exclusively via the host packaging line HMI, enabling unrivaled security. In addition, a remote web browser interface provides simple and flexible set up with four levels of user password protections and comprehensive logging, guarding printer access and supporting CFR21 part11 compliance.

Meet present and future serialization requirements

Serialization is Wolke's legacy. And the m610 oem printer makes clear why.

The Wolke m610 oem establishes the standard for a new generation of track and trace projects, featuring:

- Powerful new processing hardware and a formidable data buffer for serialized record management
- Validated Wolke remote commands and data handling protocols
- Unicode TrueType® fonts for global projects
- Innovative asynchronous communications practices

Active User Datagram Protocol (UDP) alerts provide new options for proactive notification to a host system for defined events, such as when a configurable safety buffer threshold has been reached. In addition, one-to-one confirmation of printed records informs the host system exactly which codes have been processed, eliminating the risk of lost or wasted codes, even through power outages.

IQ/OQ documentation

For the installation and start-up of the Wolke m610 oem, Videojet offers IQ/OQ documentation to facilitate GAMP® 5 compliance.

Proven technology backed by a 5-year warranty*

*Warranty subject to local Wolke/Videojet country warranty policy

Flexible web interface enables easy print control from any large screen user interface.

Powerful Data Handling

Secure, ultra-fast processing of 20 unique records per second, and printing of 2D DataMatrix or GS1 128 bar codes.

Innovative Productivity

Perpetuo Print Mode™ extends production runs. Replenish ink without stopping the line.

Integration

Compact, versatile controller mounting for easiest cabinet integration. 24V DC power for low heat emissions.

Advanced innovation drives productivity

New ink capabilities

The specialized portfolio of Wolke TIJ inks has been optimized for critical applications. The inks deliver outstanding print contrast and light-fastness, in combination with long de-cap times.

Four printhead designs for integration into tight spaces

Wolke Premium Black

Premium Black is a fast-drying and highly reliable ink offering unrivaled high contrast prints. The ink was specifically developed by Videojet for optimum performance in Wolke TIJ systems where optical density and ultra dark codes are required for reliable scanning of bar codes or text. High contrast codes printed with Premium Black ink exhibit excellent light-fastness to stage WS 6*.

Wolke Global Black

With its combination of long open times and short dry times, this exclusive and proprietary TIJ ink is ideal for printing on unpainted and coated surfaces and other paper substrates. Wolke Global Black impresses with high-quality printing even after long interruptions.

Wolke Water-Resistant Black

Water-Resistant Black is a very good solution for moist and /or cold product applications.

The specialized formulation minimizes bleeding or smearing of ink when the packaging is exposed to moisture or condensation after printing. This solution is particularly useful for pharmaceutical cold chain applications.

Wolke Global Solvent

Global Solvent unlocks extraordinary new applications for TIJ marking on many non-porous materials such as glossy cartons, blister foils, coated labels or soft plastics.

While not equivalent to MEK in adhesion, Global Solvent offers all-new applications for Wolke TIJ on pharmaceutical materials beyond paperboard cartons.

*WS 6 = very good according to blue wool scale
Standard paper APCO II / II in accordance with DIN ISO 12040th.

Peace of mind comes as standard

Videojet Technologies is a world-leader in the product identification market, providing in-line printing, coding, and marking products, application specific fluids, and product life cycle services.

Our goal is to partner with our customers in the consumer packaged goods, pharmaceutical, and industrial goods industries to improve their productivity, to protect and grow their brands, and to stay ahead of industry trends and regulations. With our customer application experts and technology leadership in Continuous Inkjet (CIJ), Thermal Inkjet (TIJ), Laser Marking, Thermal Transfer Overprinting (TTO), case coding and labeling, and wide array printing, Videojet has more than 345,000 printers installed worldwide.

Our customers rely on Videojet products to print on over ten billion products daily. Customer sales, application, service, and training support is provided by direct operations with over 4,000 team members in 26 countries worldwide. In addition, Videojet's distribution network includes more than 400 distributors and OEMs, serving 135 countries.
