

Print job management with CLARiSUITE®

CLARiSUITE links on-product coding to a centralized print job database.

Printers in a CLARiSUITE network are managed from a central print job database – taking print job creation and management off the production floor. Job data is stored centrally and print jobs can be initiated by CLARiSUITE or external manufacturing systems.

The product or appropriate code can be selected at the CLARiSUITE-installed PC or Videojet printer. Or, a bar code can be scanned from a work order or from the product itself with a hand-scanner. Information such as date/place of manufacture, best-before date, lot/batch number and a wide range of both production and consumer information is accurately applied to every product.
